

Ikhsan Fauzan Adzima

IT Infrastructure

☎ 085155107116
✉ Ikhsanfauzan5@gmail.com
📍 Citeurep, Bogor

SUMMARY

Experienced in IT infrastructure with 5 years of expertise in providing essential server, storage, and hardware management solutions. Proven ability to ensure optimal and consistent operational system performance. I am skilled in collaborating with teams for effective problem-solving and designing strategic solutions for ongoing projects and problem-solving strategies.

EXPERIENCE

IT Infrastructure 01/2024 - Present

Project Currently Avows Technologies

- DHCI Data Center Expansion: This project aimed to upgrade and rejuvenate end-of-support bare-metal servers. Applications, databases, and services hosted on these legacy servers were migrated to the new DHCI infrastructure, ensuring enhanced performance and support.
- High Availability SQL Server Always ON Database Core Banking: This project aimed to enhance the availability and high availability (HA) of the core banking database. It enabled the core banking database to operate in an active-active configuration using a quorum system method.
- Operated and maintained VMware vSphere environments, ensuring high availability and optimal performance of virtual infrastructure.
- Conducted routine maintenance to enhance security, stability, and hardware compatibility while leveraging new vSphere features for improved virtualization management.
- Maintained and operated infrastructure servers in both on-premises data centers and Google Cloud Platform (GCP) environments.
- Deployed web-based and microservices applications using Web Deploy and GitHub Actions CI/CD workflows.
- Managed GitHub repositories by administering access controls, user permissions, and repository configurations.
- Developed automation scripts and playbooks using Ansible to streamline repetitive operational tasks and job executions.
- Operated and maintained enterprise backup solutions such as Rubrik for data protection and disaster recovery purposes.
- Managed archiving and long-term storage infrastructure using NetApp systems to support compliance and data lifecycle policies.
- migration projects from bare-metal infrastructure to VMware vSphere, improving scalability, availability, and operational efficiency.

IT Infrastructure 05/2022 - 11/2023

Avows Technologies

- Oversaw the design, implementation, and maintenance of the organization's IT infrastructure, achieving a 99.9% uptime and ensuring optimal performance and availability.
- Migrated data warehouse databases from on-premise servers to Google Cloud instances.
- Collaborated with the IT development team to understand infrastructure needs for new software releases, ensuring timely and effective solutions.
- Relocated on-premise servers between data centers.
- Implemented DHCI (Disaggregated Hyper-Converged Infrastructure) technology on-premise at the Disaster Recovery Center (DRC).
- Designed and implemented strategic solutions for infrastructure improvements and new projects.
- Migrated servers from OpenStack to VMware.

Experience

- Managed and maintained server, storage, and hardware systems to ensure optimal and consistent operational performance.
- Implemented server and storage systems, including mounting and powering on in the data center.
- Performed performance reporting for all maintained devices every six hours.
- Conducted investigation and troubleshooting for any system failures in devices.

EDUCATION

Information Technology
University Gunadarma - Bachelor's degree

08/2014 - 03/2018

CERTIFICATES

Google Cloud Fundamentals: Core Infrastructure
Cloud Skill Boost

04/2023 - Present

A DevOps Engineer defines and implements best practices for efficient software delivery and infrastructure management. This learning path offers curated on-demand courses, labs, and skill badges, providing hands-on experience with essential Google Cloud technologies. Upon completion, explore the Google Cloud DevOps Engineer certification for the next steps in your career.

Container, Kubernetes, Openshift
Red Hat Academy

05/2022 - Present

Containers, Kubernetes, Openshift (Red Hat OpenShift I: Containers & Kubernetes) introduces participants to building and managing containers for deployment in Kubernetes clusters. This training teaches participants to build core knowledge and skills in managing containers through hands-on experience with Containers, Kubernetes, and the Red Hat OpenShift Container Platform required for various roles, including developers, administrators, and web technicians.

SKILLS

Network Technologies	Basic	Cloud Technologies	Advanced
Server Administration	Advanced	Virtualization Platforms	Advanced
Collaborative Problem Solving	Intermediate	IT Policies and Procedures	Basic
